

Ryan W., Christina X., Saray F., Amitis E., and Parsa S.

Group 1

March 13, 2026 Meeting

Goal for Today's Meeting:

- Discuss what to have prepared and come up with an optimal deadline (with flexible dates) to finish the entire project
 - Should we work on the oral presentation first or chip away at the manuscript?
 - How should we approach the oral presentation? What do you recommend doing to organize our data?
 - Check which plots should be used in the results section

What We Did:

- Created a fourth aim (aim 2 in the research proposal) focusing on the core microbiome analysis (determine if the core gastric mucosal microbiome differs by biological sex)
- Did a skim reading of the literature for functional analysis
- Re-did and checked over the functional analysis code to make sure the results (that seemed abnormal according to Avril) are not due to incorrect coding

What We Plan to Do:

- Polish our figures to make them publication-ready for the final manuscript
- Expand on our new proposed aim (core microbiome)
- Do literature readings for functional analysis to find pathways that are commonly upregulated in the absence of *H. pylori*
 - Was having a bit of a hard time finding proper articles, what keywords do you recommend?

Timeline + Task Assignment:

- Discuss what to prioritize to not get overwhelmed during the final season
