

- Start: 2:50 pm

- For 305, just add the manuscript as it is
- For UJEMI, we must:
 - Run the antrum and body site samples in parallel (two samples per patient will impact the results otherwise)
 - Look at the body → more differences between disease vs. non-disease
 - The plan is to run body sites and then if we were unsuccessful we run different types of stats that takes these into account
- We should also update the README file
- Talked about limitations and future studies feedback
- Supplemental figures must be mentioned in the manuscript and have titles in the supplemental pdf/file accordingly
